ABOUT ME

I'm a front-end Website Developer with about 3-4 years of hands-on experience building web applications that are fast, scalable, and user-friendly. I'm fluent in JavaScript, HTML, CSS and Python. I am also going into ReactJs and later on go into NodeJs for the backend and learn some databases to become a full-stack Web Developer. I am seeking for a community where I can impact and learn better from.

SKILLS

Languages Learnt   JavaScript | CSS | HTML | Python

EXPERIENCE

Tech Newbie   **August 2022 - October 2022**

A newbie in Tech.   *Page Innovations.*

- Introduced into the world of tech. Taught the fundamentals and basics of Web development, where I was taught HTML and CSS for 2 months. Went back to school but still continued my journey by self-teaching myself and reading documentation.

Web Development Journey   **February 2023 - May 2023**

Frontend journey   *Page Innovations.*

- Came back to continue my web development journey, here I was refreshed and I did JavaScript and had a python too for my backend. Afterward, I entered Django framework for my backend which I used the knowledge of python. Got my certification after the training.

    POV: I'm a front-end developer; I'm in for **ONLY** Front-end projects.

SIWES PROGRAM   **October 2024 - December 2024**

Intern/Junior Developer   *Page Innovations.*

- Collaborated with a team of developers to build modern and responsive full-stack web applications using best practices, where I took the front-end.
- Developed soft skill within the SIWES Period and learnt a lot from the senior developers.

NOTABLE PROJECTS

Driving School Website

- Independently built a web application that showcases the offers and the programs a driving school offers. It's a front-end project with responsive and attractive designs.
- Used HTML, CSS and JavaScript to build the website and it's user-friendly and attractive to users.

Tech School Website

- Single-handedly built a Tech School website that showcases the courses they offer, the tutors and the courses the tutors offer and so many more.
- Used interactive colors and images that explains a lot about the website to a lame-man. Responsive and user-friendly.

Raphael's Bot

- Built a chatbot just like Gemini and ChatGPT, it has a swift response and had a lot of features like pause, include images to your questions, light and dark theme and so on.
- Also responsive to user and I also fetch API for it so as to get information from the internet and send it out as output to the users, It can be included in any webpage depending on the website.

♦ This website taught we a lot about API's and I'm ready to build more reality projects that includes API's.

EDUCATION AND CERTIFICATIONS

Providence Nursey and Primary School

Lagos state, Nigeria

Providence Heights Secondary School

Lagos state, Nigeria

Page Innovations (where I got my full-stack certification)
